

PROFILE SUMMARY

- Senior IT Professional with extensive expertise in DevOps Engineering, Cloud Solutions (AWS), Site Reliability Engineering, Technical Support, and Project Management, excelling in driving client relationships and enhancing operational efficiency in dynamic environments.
- DevOps Leadership: Spearheaded the design and execution of DevOps strategies, focusing on CI/CD pipelines, automation, and cloud orchestration, optimizing delivery cycles, reducing time-to-market, and improving operational agility.
- Cloud-Native Expertise: Maintained in-depth proficiency in Serverless Architectures, Container Orchestration, and Infrastructure as Code, critical for modern cloud deployment strategies and ensuring seamless scalability and reliability.
- Agile Implementation: Streamlined DevOps processes by implementing Agile Methodologies, fostering continuous integration, delivery, and collaboration among cross-functional teams to enhance product quality and deployment efficiency.
- Project Management Excellence: Directed end-to-end project management activities, including risk assessments, contingency planning, and adherence to quality standards, ensuring timely and successful project completions.
- Security and Compliance: Enforced security best practices within cloud environments, ensuring compliance with industry standards and safeguarding sensitive data through robust identity and access management protocols.

CORE COMPETENCIES

- DevOps Strategy & Implementation
- Automation Frameworks
- Incident Reporting

- Cloud Infrastructure Management
- Security and Compliance
- Client / Stakeholder Engagement

- CI/CD Pipeline Optimization
- Performance Optimization
- System Administration

TECHNICAL SKILLS

Cloud: AWS (Certified Solution Architect)

Version Control: Git

CI/CD Tools: Jenkins, GitHub Action

Application Server: Tomcat

Container Tools: Docker, Kubernetes, Helm

Programming Language: Python

Operating Systems: Linux, Windows

Build Tools: Maven, Gradle

Configuration Tools: Ansible, Terraform

Scripting Language: Shell Scripting

Monitor & Logging: EFK, Prometheus and Grafana

Project Management: JIRA, Service Now, Confluence, Azure DevOps Board

WORK EXPERIENCE

Since May'22: Tata Consultancy Services, Noida as IT Analyst-DevOps Engineer

Key Result Areas:

- Leading design, implementation, & optimization of scalable, secure, and cost-efficient solutions across AWS and Cloud platforms.
- Monitoring CI/CD pipelines, automation workflow, and container orchestration tools like Kubernetes and Docker to enhance software delivery and deployment processes.
- Spearheading the development of cloud-native applications, leveraging serverless technologies and Microservices architecture to meet business objectives.
- Establishing real-time monitoring, logging, and alerting systems using tools like Cloud Watch and Grafana for performance optimization and incident management.
- Continuously analyzing cloud expenditure, optimizing resource allocation, and implementing cost-saving measures without compromising performance.
- Driving automation initiatives for infrastructure provisioning, configuration management, and environment setups using tools like Terraform, Cloud Formation, and Ansible.
- Coaching teams on DevOps methodologies, cloud best practices, and emerging technologies to build organizational capability and enhance team performance.

Projects Managed:

Title: Dockerized AWS Fargate Serverless Application

Description: Containerized a static website featuring a Flutter front-end and a Kotlin back-end, deploying it on AWS Fargate to utilize serverless architecture for auto-scaling and cost optimization. Leveraged GitHub for version control and CI/CD pipelines to streamline development workflow and collaboration. Applied Terraform for Infrastructure as Code (IaC) to ensure scalability, reproducibility, and efficient cost management.

Responsibilities:

- Designed & implemented a serverless architecture for seamless application scaling on AWS Fargate.
- Containerized application components using Docker for consistent and portable deployments.
- Deployed Infrastructure as Code with Terraform, enabling automated provisioning and scalability of resources.
- Integrated CI/CD pipelines using GitHub Actions to automate build, test, and deployment workflow.

Title: Deployment of a SaaS Java-Based Application Using CDK Python Code and Tomcat

Description: Deployed a SaaS-based application on an EC2 Linux instance, utilizing Tomcat web server to manage a third-party WAR file. Developed AWS infrastructure using CDK Python code & automated deployments with GitHub Actions. Enhanced authentication processes by integrating SAML & OAuth with Azure AD to provide secure and seamless access to the application.

Responsibilities:

- Deployed and configured the SaaS application on EC2 instances, leveraging Tomcat for application hosting.
- Engineered infrastructure with AWS CDK Python to automate resource provisioning.
- Integrated advanced authentication mechanisms using SAML and OAuth for secure access.
- Automated deployment processes through GitHub Actions, ensuring rapid and reliable delivery.

Title: Automation and Cost Optimization Initiatives

Description: Developed a suite of automation tools and policies to optimize storage, compute costs, and enhance security and system performance. Key initiatives included automating EBS snapshot cleanup, implementing S3 lifecycle policies, scheduling EC2 shutdowns, and integrating monitoring for application and API performance.

Responsibilities:

- Engineered Lambda functions to identify and delete redundant EBS snapshots, minimizing storage costs.
- Automated EC2 instance shutdowns during non-business hours to optimize compute resource utilization.
- Designed S3 lifecycle policies to automate data archiving & deletion, reducing storage costs and improving system efficiency.

Nov'19-Apr'22: Infosys Ltd., Hyderabad as Cloud Engineer

Key Result Areas:

- Orchestrated a Microservices architecture leveraging AWS services, Kubernetes, and back-end tools, ensuring optimal scalability and performance.
- Configured & optimized back-end tools including MySQL, MongoDB, RabbitMQ, Redis, Solr, and Pentaho to manage distributed system for Microservice architecture.
- Executed a POC to implement Prometheus and Grafana on Fargate using Helm, enabling advanced metric scraping for EC2-based back-end.
- Upgraded multiple EKS clusters and streamlined worker node rotation processes, achieving zero downtime by utilizing Pod Disruption Budgets and Taints.
- Configured Nginx Ingress Controller within EKS clusters for efficient Layer 7 routing and seamless application delivery.
- Implemented advanced log shipping for Fargate pods to CloudWatch using Fluentd, enhancing observability and troubleshooting capabilities.

REWARDS & RECOGNITION

- Conferred with the:
 - “Star of the Month Award”
 - “On the Spot (Team) Award”

CERTIFICATIONS

- AWS Certified Solutions Architect-Associate in 2023
- Infosys Course Completion Certificates on RHEL Administration in 2020

EDUCATION

B.E. in Electronics & Telecommunication Engineering
Dr. D. Y. Patil College of Engineering, Pune, Maharashtra
2019

PERSONAL DETAILS

Date of Birth: 15th October 1998 | **Languages Known:** English & Hindi | **Address:** Vaishali Bihar
