

PROFESSIONAL SUMMARY

Highly accomplished Senior DevOps Engineer with 6+ years of total professional experience with 3+ years of dedicated, hands-on experience in automating, optimizing, and supporting mission-critical deployments on AWS, leveraging configuration management, CI/CD, and DevOps processes. Proficient in tools like Docker, Kubernetes, Ansible, Jenkins, Git, and Terraform. Experienced in working with cloud-native environments and enhancing infrastructure reliability, scalability, and performance.

PROFESSIONAL EXPERIENCE

Senior Subject Matter Expert DevOps/DevOps Engineer
Chegg India Pvt. Ltd.

Sep 2022 – Present

Responsibilities:

- Built and managed CI/CD pipelines using Jenkins for internal content-review and student-support applications, reducing release time by 40%.
- Designed and deployed scalable, fault-tolerant infrastructure on AWS using Terraform, ensuring high availability for Chegg's backend APIs and internal reviewer dashboards during peak academic seasons.
- Developed Ansible playbooks for automating configuration management, provisioning EC2 instances, and deploying internal applications used by MNE's and content reviewers.
- Managed containerized applications using Docker and orchestrated them via Kubernetes (EKS).
- Built and maintained custom Docker images using optimized Docker files, and managed them via a private Docker Hub registry.
- Monitored system health, disk usage, memory, and CPU utilization, ensuring systems operate within defined thresholds.
- Collaborated with content, QA, and engineering teams to streamline automation of content validation pipelines and review system deployments, boosting developer productivity and reducing manual errors.
- Developed custom Ansible modules and collections using Python to extend automation capabilities and standardize reusable infrastructure components.
- Installed, configured, and maintained Linux server environments, ensuring optimal system performance and reliability.
- Automated different use cases of incident management using Ansible like service, memory, disk alerts.
- Developed multiple automation playbooks in Ansible to streamline ServiceNow RITMs and tasks.

Subject Matter Expert
Chegg India Pvt. Ltd.

Jan 2020 – Aug 2022

Responsibilities:

- Collaborated with the engineering and platform operations teams to report technical issues, improving internal workflow efficiency for content review systems by 20%.
- Supported creation and documentation of technical manuals and content templates, reducing review turnaround time by 15% through standardized version-controlled workflows.
- Reviewed and validated 5000+ in electrical and electronics engineering with 98% accuracy, ensuring content quality and consistency across Chegg's learning platform.

Technical Support Executive
Entab Infotech Pvt. Ltd.

May 2019 – Sep 2019

Responsibilities:

- Monitor system performance and perform routine checks to ensure software reliability and user accessibility.
- Performed basic installation, updates, and patch support for software applications.
- Conducted training and onboarding sessions for new users to improve product adoption and usage.

TECHNICAL SKILLS

Version Control Tool:	Git, GitHub
Operating Systems:	Linux, Windows
CI-CD Tool:	Jenkins
Configuration Management Tool:	Ansible
Infrastructure as Code (IaC):	Terraform
Cloud Services:	Amazon Web Services (AWS)
Scripting Languages:	Shell Script, Python, YAML, Bash
Containerization:	Docker
Container Orchestration:	Docker Swarm, Kubernetes
Artifact Repositories:	ECR, Docker Hub
Monitoring and Observability:	Prometheus and Grafana
ITSM Integration:	ServiceNow

PROJECTS

1. CI/CD Pipeline for Content Review Automation

Environment: Jenkins, GitHub, Ansible, Docker, AWS

- Developed a robust CI/CD pipeline using Jenkins to deploy updates to the content management web application used by experts.
- Integrated GitHub for version control and implemented branch-based workflows for development, staging, and production environments, improving code quality and release control.
- Automated provisioning and application configuration using Ansible playbooks, reducing manual overhead for review teams by 30%.
- Containerized the application using Docker and deployed it on EC2 instances behind an AWS ALB to ensure scalability and fault tolerance.
- Enabled monitoring using AWS CloudWatch to track application performance and error logs.
- Increased deployment frequency, enabling faster feature releases to support expert workflows.

2. Secure Content Storage and Access Control System

Environment: AWS S3, IAM, Ansible, Lambda, CloudTrail.

- Used AWS S3 for storing academic assets such as solved answers, multimedia content, and subject files.
- Implemented fine-grained IAM roles and policies to restrict access based on user roles for In-house expert, MNEs expert, admin teams.
- Integrated AWS Lambda functions with CloudTrail and SNS to automatically detect and alert unusual access patterns or unauthorized attempts.
- Automated initial setup and permissions configuration using Ansible, ensuring consistent access controls across all environments.
- Restricted public access to all buckets and implemented S3 bucket policies with encryption and lifecycle rules to ensure secure and cost-effective storage.
- Reduced manual configuration errors and access issues by 80% through Ansible automation.

3. Sox Extraction Reporting using Ansible Tower

Environment: Ansible, Ansible Tower, ServiceNow, Ansible Vault, log files.

- Developed Ansible playbooks to execute client-provided shell scripts across multiple delegated Linux servers.
- Implemented file fetching and consolidation mechanism to transfer outputs from remote servers to the Ansible control node (local temp directory).
- Integrated Ansible Tower job templates with ServiceNow (SRD requests) to enable on-demand execution triggered by user requests.
- Designed error handling, logging, and retry mechanisms to ensure reliable execution across heterogeneous environments.
- Ensured secure handling of sensitive data using Ansible Vault and role-based access controls in Ansible Tower.
- Optimized playbook performance for parallel execution across multiple hosts, reducing audit turnaround time.

EDUCATION

Bachelor of Technology | National Institute of Technology, Uttarakhand | 2014-18

Intermediate | Bal Mandir Senior Sec. School Ranipur, Haridwar | 2011 – 2013

High School | S G R H S School, Agra | 2011

LANGUAGES

English | Hindi |
