Prashant Sediwal

Lead Engineer - Product Development

PROFILE SUMMARY

M.Tech. (honours) with 9+ years of C++ developments experience. I have worked on Linux/Unix Rhel Debian applications. I have strong knowledge about C, C++, QMl, shell scripts and objective oriented programming (Oops). During my career I have worked on many complex projects in C & CPP and Multithreading, multi processing, IPC and socket programming in C++, having experience in working on scaled agile framework, gtest, Jenkins, GitLab, iso8582, ant, ci pipeline. Having experience in Payment Domain & Automotive Domain.

EDUCATION

2014
M.Tech
Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV), Bhopal

2012
B.Tech/B.E.
Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV), Bhopal

2008

WORK EXPERIENCE

Feb 2022 - Present
Lead Engineer - Product Development
HARMAN
C++ Linux development. cmake configuration, gtest and Design and develop automotive applications for Mrecedes-Benz and John Deere.

Nov 2018 - Feb 2022
Senior Software Engineer
Worldline India Pvt Ltd
C , C++, Oops, Socket Programming, IPC, Multithreading, File Handling, Shell Scripting, Shared Memory, STL, ant, Debian and rpm packages, gtest, authorization and switching, acquiring,ISO8583, payment domain,gtest.

PERSONAL INFORMATION

Total work experience
9 Years 0 Month

KEY SKILLS

Automotive
Unit Testing
C
C++
Linux
UNIX
c++ Programming
Embedded C
Socket Programming
STL
OOPS
Multithreading
multi processing
Linux Development
Docker

Jenkins

Gitlab

Feb 2017 - Nov 2018

Software Programmer

Microworld Software Services

Build linux / unix applications using C, C++, shell script., Unix, Multithreading, data structure and algorithms, socket programming, TCP & UDP Sockets, STL. Design, build, and maintain efficient, reusable, and reliable C++ code maintain Debian and Red hat packages and other build environment.

Jun 2015 - Feb 2017

Software Developer

Forbes Technosys Ltd

->Build linux / unix applications using C++ and QT platform ->Designed, coded, implemented and tested new features and modules for the derivatives system ->Perform special requests for different projects ->Analyzed server side infrastructure including function calls for memory management, threads synchronization, multi threading, ->Create embedded applications matching clients requirement ->system programming for ubuntu and raspbian os for deployment in raspberrypi.

Projects

631 Days

HMI interface for NGPD and Gen 5 Displays

??? Working for Construction & Forestry Division of John Deere automotive. ??? Worked for Automotive Displays for HMI Development in C++, User Interface (UI) Design in Qt/QML.

668 Days

PC Simulation (SOD and DMS)

??? The Seat occupant detection (SOD) sub system in MPIC system is responsible to detect the occupancy detection/classification of the occupants present in the vehicle. The system then communicates the occupancy related information to the other consumers connected over network. It also detects the presence of a human head near the roof for the rear middle occupant. ??? Driver Monitoring System (DMS) is watching for driver face, eye blink, and mouth to monitor driver state, there are sever use case for safety reasons to detect if driver fells sleepy then warn to ECU. ??? PC simulation based on Vector canoe we can see all input and output signal visualization on canoe graph for analysis of both subsystem SOD and DMS.

214 Days

WLP-FO Acquiring Australia

WLP-FO is standards framework for authorization & switching. Need to create acquiring instance for Australia and New Zealand Banking Group Create an Interface Base24 on ISO8583 using WLPFO protocol guidelines. This interface can compose decompose validate different data element and send to authorizer service, and configure authorizer in such a way that after all checks it can able to switch out message to different scheme like Mastercard, Visa, Amex.

578 Days

WLP-FO Acquiring India

Magnus is a 20+ years old legacy SWITCH. It has some limitations which restricts scalability & flexibility to rollout out new products & solutions at the expected pace in the market. Some of the components in the technology stack are obsolete & not in support by the OEMs as well Project is to gradually replace MAGNUS (SWITCH) by WLP-FO - Phase 1 : Visa/MasterCard acceptance (including BQR) and H2H interface (WLP-FO to TTMS) - Phase 2 : RuPay/AmEx acceptance, ON-US interface to Issuer banks (onus transaction routing) and other H2H interface with partners

457 Days

eScan client & antivirus for corporate

eScan client & antivirus for corporate contains all security solutions along with that it is developed for communicate with escan management server. eScan client gets the commands from management server and perform the action on client machine.

485 Days

eScan Antivirus For Linux

eScan Antivirus for Linux Desktops is a comprehensive security solution designed and developed to protect your Linux machines from virus and other such cyber threats.

276 Days

Check Deposit Kiosk

This application is used currently in many bank for check deposit pupose but we use raspberry-pi for executing this application for low cost and minimum space uses.

335 Days

Coin Vending Machine

This machine provides change of coin from note (note to coin changer) in require denomination as per bank requirement. Currently this project lives in many leading banks like SBI, Canara, and ICICI.

COURSES & CERTIFICATIONS

- Advanced Embeeded System Design
