BHAVESH PANDYA

[redacted]

Summary

Experienced Java Developer with over 8+ years of hands-on experience designing, developing, and deploying enterprise-level applications using Java, Spring Boot, and microservices architecture. Proven track record of delivering scalable and high-performance backend solutions for diverse industries. Strong background in backend development, RESTful APIs, and cloud-native applications, with a track record of delivering scalable and robust solutions to meet business objectives. Effective team leader and collaborator. Adept at leading Agile teams, fostering collaboration, and driving innovation through continuous improvement practices.

Skills

Java, Spring Boot, Spring Cloud, Spring Data, Spring Security, Spring MVC, Rest API, Hibernate, Microservices Architecture, Docker, Kubernetes, GIT, MAVEN, AWS, Azure Cloud, Oracle DB, Apache kafka, ELK, DSA

Domain

Banking, Infrastructure

Experience

Harman Connected Services
Lead Engineer | 07/2021 - Present
Project- Marimba
Roles and Responsibilities:

- **Microservices Architecture**: Designed and developed scalable microservices using Spring Boot for modularity and efficient service-to-service communication.
- **Spring Security Implementation**: Integrated Spring Security for robust authentication and authorization across microservices.
- **RESTful API Development**: Developed and consumed RESTful APIs, ensuring seamless and secure data exchange between services and external systems.
- **Spring Data & Persistence**: Implemented data access layers with Spring Data JPA, optimizing database interactions and transaction management.
- **Cloud Deployment & Management**: Deployed and managed microservices on AWS Cloud, utilizing EC2, S3 and RDS for scalability and cost-efficiency.
- **Distributed Messaging with Kafka:** Leveraged Apache Kafka for communication between microservices.
- **System Security & Compliance**: Ensured system security and compliance using OAuth2 and JWT for secure API access and data protection.
- **Team Leadership & Mentorship**: Led a development team, provided technical guidance, conducted code reviews, and mentored junior developers.

FIS Global Solution
Senior Software Engineer | 04/2019 - 07/2021
Project- Infinity Process Platform
Roles and Responsibilities:

- **Design and development** of Java-based applications using Spring Boot and Microservices architecture.
- **Built and maintained RESTful APIs** for scalable, modular services.
- **Optimized performance** through JVM tuning, caching strategies, and query optimization.
- **Led development teams**, conducted code reviews, and provided mentorship to junior developers.
- **Architected and implemented microservices**, ensuring scalability, reliability, and fault tolerance.
- **Automated CI/CD pipelines** using Jenkins and Docker for continuous integration and deployment.
- **Ensured security** through OAuth, JWT, and encryption techniques for API authentication and data protection.

- **Collaborated cross-functionally** with frontend, QA, and DevOps teams for seamless software delivery.
- **Performed debugging and troubleshooting** of production issues using log analysis and performance monitoring tools.
- **Documented technical solutions** and maintained API documentation with Swagger.

Infosys
Senior Software Engineer | 01/2018 - 04/2019
Project- Cummins SSA(Special Sales Allowances)
Roles and Responsibilities:

- **Requirements Gathering:** Coordinated with onsite team leads to gather and clarify project requirements.
- **Client Interaction:** Engaged with clients to understand functional requirements and ensure alignment with project objectives.
- **Code Delivery:** Delivered code that adhered to client constraints and specifications, ensuring the final product met client expectations.

Intellect Design Arena
System Engineer | 11/2015 - 01/2018
Project- Intellect RBX
Roles and Responsibilities:

- **Requirements Coordination**: Coordinated with onsite team leads to gather and clarify project requirements.
- **SDLC Involvement**: Participated in all phases of the Software Development Life Cycle (SDLC), including Analysis, Design, Development, Unit Testing, and Deployment.
- **Client Interaction**: Engaged with clients to understand and document functional requirements, ensuring alignment with project goals.
- **Complex Functionality Implementation**: Independently implemented complex functionalities to meet project needs.
- **Code Delivery**: Ensured that delivered code adhered to client constraints and specifications, meeting project requirements.
- **Coordination Across Teams**: Coordinated with both onsite and offshore teams throughout requirement analysis and development phases.
- **Testing and Support**: Involved in unit testing and provided production support activities to ensure system reliability.

Education

NIT Jamshedpur
MCA | 05/2015
