[redacted]

[redacted]

To be associated with an organization where I can effectively contribute my skills as Software Professional, possessing competent technical skills so as to deliver my best towards successful and profitable operation of the firm and ensuring a high-level job satisfaction.

Professional Summary

- Senior Full Stack Engineer at **Cognizant.**
- 8.3 years of experience in Automation, **Development**, **Data Engineering** and **Data Analytics**.
- Sound knowledge and hands on experience on technologies like **Python**, **SQL/NoSQL, Azure Resources**, **GCP** Cloud, **AWS** Cloud, **Shell, PowerShell, Power BI.**
- Around 7 years of experience in **Python** framework development and scripting.
- Developed comprehensive **database designs**, **schemas** and optimized **views**.
- Hands on experience on creating **one time** & **delta** data transformation pipelines.
- Hands on experience on creating validation framework in python for **Data validation** post migration.
- Sound knowledge on **ETL (Extract – Transform – Load)** pipeline development for different data sources like Azure **Synapse Datawarehouse**, **Azure SQL Servers**, **MS-SQL Servers**, **Snowflake** & **Rest API's** etc.
- Good knowledge on **SQL** scripting used for data **transformations & validations** in various data sources.
- Acquiring knowledge on **PySpark, Azure Databricks** and **Azure Data Factory.**
- Hands on experience on **CI/CD** tools like **Jenkins**, **Airflow** and **Azure DevOps**.
- Good understanding on Azure resources like Azure **Data Lake** (ADLS)/**Azure Blob** storages, **Azure Functions**, Azure **Key Vaults**, Azure **Managed Identities**, Azure **Source Control**, Azure **Storage Explorer** & Azure **File share**.
- Successfully initiated and executed Proof of Concept (**POC**) by co-ordination with multiple teams within organization and with Microsoft Support team for project.
- Actively involved in versioning control activities using bit bucket and CI/CD pipelines for the whole project.
- Good knowledge on tools like Postman, Lens (Kubernetes cluster), MobaXterm, SQL-DBM, Trello, JIRA, ServiceNow, Confluence & SharePoint.
- Experience in **REST API** & **UI Automation** using Behave (**BDD framework**), **Selenium**.
- Expertise on **Web Scraping** technologies with **Data cleaning**, **Data wrangling** and **visualization** knowledge using python modules like **Request, Beautiful Soup, Pandas** etc.
- Able to **handle technical team** and project flow for development purpose.
- Good experience on working and troubleshooting in both Windows and Linux based platforms.
- Have experience in developing and maintaining the modules of automation framework.
- Expertise in understanding, tracking changes, stabilizing and maintenance of code.
- Good analytical, debugging and problem-solving skills.
- Good knowledge in **Agile** process model and **Scrum** methodology.
- Versatile team player with good communication and interpersonal skills.

Technical Skills

Languages	: **Python**, **SQL/NoSQL, NodeJS, Azure Resources**, **Shell, PowerShell, Power BI, JSON**
Operating System	: Linux, Windows
Tools	: SQL Server Management Studio (SSMS), Visual Studio Code IDE, PyCharm IDE, MS Power BI Desktop, GitHub Desktop, Azure Cloud, Azure storage explorer, Azure-DevOps, Putty, MobaXterm, Visio, SQL-DBM, Airflow, Jenkins, Splunk, DB Artisan, Jira.

Project Experience

Project 1:

Organization	Cognizant		
Project Name	**Roadside Assistance Chatbot**	**Duration**	March 2024 to till date
		Team Size	10
Domain	**Insurance**		
Description	The Purpose of this project is to create an intelligent chatbot to provide roadside assistance services. The chatbot will help users with emergency support, troubleshooting common vehicle issues, and connecting them with live assistance if needed. The project leverages several technologies for a seamless user experience and robust backend management.		
Role	Senior Full Stack Developer		
Technologies	Dialogflow, Node.js, GitHub Actions, Google Cloud Platform (GCP), Firestore		
Responsibilities:	1. Dialogflow Setup: • Create intents for various roadside assistance scenarios (e.g., "flat tire", "dead battery"). • Define entities and parameters to capture specific details from the user (e.g., location, type of vehicle issue). • Configure fulfillment to call the Node.js webhook. 2. Node.js Webhook: • Develop the webhook to handle Dialogflow's JSON requests. • Implement logic to process user inputs and interact with Firestore for storing and retrieving data. • Integrate with external APIs if needed (e.g., location services, emergency contact services). • Ensure that responses are formatted correctly and sent back to Dialogflow. 3. GitHub Actions: • Create workflows for automated testing and deployment. • Set up environment variables and secrets securely. 4. Google Cloud Logging: • Configure logging for the Node.js application to capture detailed logs. • Set up alerts and dashboards to monitor chatbot performance and user interactions. • Use Cloud Logging and Cloud Monitoring to analyze trends and identify issues. 5. Firestore Integration: • Design Firestore database schema for storing chat history and user data. • Implement CRUD operations to manage chat sessions and user data. • Ensure data privacy and security, following best practices for handling user information.		
Tools	Visual Studio Code IDE, Firestore DB, GCP, Dialogflow		

[redacted]

Project 2:

Organization	Cognizant		
Project Name	**Data Ops CI Account Monitoring Dashboard**	**Duration**	August 2023 to March 2024
		Team Size	2
Domain	**Life Science**		
Description	The purpose of the DataOps Account Monitoring Dashboard is used to track and monitor **Azure Service Principals** and **Azure Functional Accounts** within GSK. In the process an operational activity of the Products, Azure Service Principals and Functional Accounts information including **expiry details** are tracked on **Power BI Dashboard** and **Expiry Alert notifications** are being sent to the respective **Product Owners** and **Support product managers** to maintain the health of the respective accounts.		
Role	Data Engineer (Python, SQL, MS Graph API's, Azure Resources)		
Responsibilities:	[redacted]		
Technologies	Python, SQL, JSON,Azure Cloud, ServiceNow API, MS Azure Graph API,Pandas, Request, Power BI, Power Apps		
Tools	Visual Studio Code IDE, PyCharm IDE, SQL Server Management Studio (**SSMS**), MS Power BI, MS PowerApps, Jira, GitHub Desktop, Azure Cloud (Subscriptions, Resource Groups, Key Vaults, Managed Identities, Function Apps, BLOB Storage Accounts, Azure MS SQL, Azure DevOps, Azure Source Control).		

[redacted]

Project 3:

Organization	Cognizant		
Project Name	**PAS (Pickles Auction Services) – Data Migration**	**Duration**	July 2021 to July 2023
		Team Size	5
Domain	**Digital**		
Description	Develop **Synapse Data Warehouse** on Azure Cloud due to cost efficiency and perform migration from multiple data source like **MS-SQL** Data Warehouse, **Snowflake** Data Warehouse, Azure Data Lake Storage.		
Role	Python Framework Developer/Data Engineer/Data Analyst (ETL)		
Responsibilities:	• Worked on creating one time & delta transformation and validation pipelines using Python, Airflow, SQL. • Executing CI/CD pipelines in airflow and publishing the data. • Performed Data Analysis post transformation executions and maintaining reports in Power BI. • Worked on Data Modelling & Mappingof tables coming from various data sources like MSSQL, Snowflake, Azure Synapse in SQL DBM.		
Technologies	Azure Synapse, Python, MS-SQL, Airflow, Azure Cloud, GitHub, Snowflake.		
Tools	PyCharm IDE, Visual Studio Code, MS-SQL server, Azure Storage Explorer, Azure File Share, Lens (Kubernetes cluster), MobaXterm, Bitbucket, SQL -DBM, Snowflake, Trello, JIRA, ServiceNow, Confluence, SharePoint.		

Project 4:

Organization	Capgemini		
Project Name	**Exchange Traded Products – (ETP)**	**Duration**	October 2019 to July 2021
		Team Size	4
Domain	**Investment Banking**		
Description	ETP is an application for traders and sales in OTC market. It is used mainly in New York, London, Hong Kong and Tokyo regions. The purpose of this project was to develop framework to **automate regression test cases** of multiple applications that are used to trade on **German & Swedish products** using **REST API** & **UI Automation**.		
Role	Python Framework Developer (Selenium, BDD framework, Jenkins)		
Responsibilities:	• Developed a framework to automate daily regression test cases for UI Applications using **Python Selenium** and **Behavior Driven Development (BDD) framework** from scratch. • Build pipelines on **Jenkins** to run automated test cases on daily basis, which would get triggered on timely basis and generate passed/failure results of automated test cases and would send email trigger to respective monitoring team. • Code check-in to **Bitbucket** on regular basis and code reviews with development team. • Posting development as well as automation related bugs on **Jira** on		

	timely basis. • Worked as a hybridresource responsible for Quality Assurance of trading applications which manages entire life cycle of equity derivatives from inception throughmaturity/expiry including any amendments in NASDAQ exchange and managing environment as well.
Technologies	Python, Selenium, BDD, Exchange Traded Products.
Tools	PyCharm IDE, GitHub, Jenkins, Splunk, DB Artisan, Squirrel, Krang, ETP, Robo Trader, Risk Viewer, Sockeye. JIRA, ServiceNow.

Project 5:

Organization	Eclerx		
Project Name	**Data Analytics & Automation**	**Duration**	August 2019 to October 2019
		Team Size	2
Domain	**E-Commerce**		
Description	The purpose of this project was to **scrape data** from E-commerce, Shopping & Restaurants websites for analysis. Post scraping the data and making it structured and meaningful power BI team use to generate reports and share the same with clients.		
Role	Data Analyst		
Responsibilities:	• **Web Scrapping** - Developed scripts for scrapping data by using selenium, xpath, beautiful soup, request python modules. • Performed analysis of scraped data by using pandas in python. • **Data Wrangling** - Transformed unstructured data to structured data for data analysis. • Used multi-threading to capture large amount of data.		
Technologies	Python Scripting, Pandas, Rest API.		
Tools	PyCharm IDE, Spider IDE, SVN.		

[redacted]

Project 6:

Organization	Atos-Syntel		
Project Name	**Moody's Investor Services - Service Now (Office 365) Automation**	**Duration**	December 2018 to June 2019
		Team Size	2
Domain	**Banking and Financial Services**		
Description	The purpose of this project was to automate ServiceNow requests those are created for **migration** of **On-Premises mailboxes** to **Office-365 mailboxes**.		
Role	Automation Analyst		
Responsibilities:	• Creation and deletionof Mailbox, Distribution lists, Mail Contacts, Office 365 Groups by using PowerShell Scripts at Service Now end. • Develop scripts for automating creation and deletion of Office 365 and On-Premises Mailbox, Distribution lists, Shared Mailbox, User Mailbox, Office 365Groups. [redacted] • Testing scripts in DEV, STG and QA environment with all Possible test cases and deploying scripts to Productionenvironments. Daily check and updates of Visio diagrams in JIRA tracking Tool. • Working in Agile Methodology for completing Automation tasks.		
Technologies	PowerShell Scripting.		
Tools	Windows ISE, Visio, JIRA, Service Now.		

Project 7:

Organization	Atos-Syntel		
Project Name	**Moody's Investor Services - CMS Automation**	**Duration**	December 2017 to November 2018
		Team Size	1
Domain	**Banking and Financial Services**		
Description	CMS is control management system including various technologies such as ECM, FileNet etc. Purpose of this project was to automate daily routine mundane tasks performed by ECM & FileNet teams.		
Role	Automation Analyst		

Responsibilities:	• Automating mundane tasks and various features of CMS technologies using UNIX shell scripting, Python and REST API. • Bug fixing in Automation scripts. • Working in Sprints to complete Automation tasks.
Technologies	Python, Unix Shell Scripting.
Tools	Putty, SVN, JIRA, Service Now.

Project 8:

Organization	Atos-Syntel		
Project Name	**Moody's Investor Services - Centralized Automation Service (CAS)**	**Duration**	December 2016 to November 2017
		Team Size	2
Domain	**Banking and Financial Services**		
Description	**Centralized Automation Service** is a tool used to automate all the daily routine tasks such as start and stop of servers, Health checks of servers, all the daily basis activities performed on both windows and Linux servers for certain technologies & Databases like Oracle, Sybase, MSSQL, DB2, Jboss.		
Role	Automation Analyst		
Responsibilities:	• Developing Automation scripts of various access standardization tasks for applications like Oracle, Sybase, MSSQL, DB2, Jboss in Unix shell scripting and Python. Spearheading the automation of various repetitive manual task which resulted in reduction of service now incidents by 50% and requests by 30%.		
Technologies	Python, Unix Shell Scripting, SQL.		
Tools	Putty, SVN, JIRA.		

[redacted]

Academic Qualification

- Graduated **Bachelor of Engineering** in Electronics and Telecommunication from Amravati University with 8.69 CGPA (Pass out Year - 2015)
- **HSC** from Maharashtra State Board with 62.00% (Pass out Year - 2011)
- **SSC** from Maharashtra State Board with 78.76% (Pass out Year - 2009)

Personal Details

[redacted]

Declaration

I hereby declare that the above-mentioned information is correct up to my knowledge and I bear the responsibility for the correctness of the above-mentioned particulars.
