

Nikhil H T

DevOps Engineer

Ph:+91 7483003994

mai: nikhilht99@gmail.com

linkedIn: [linkedin.com/in/nikhil-h-t-593047219](https://www.linkedin.com/in/nikhil-h-t-593047219)

Summary

Detail-oriented AWS DevOps Engineer with 6 years of experience in designing, deploying, and automating secure, scalable cloud infrastructure. Specialized in implementing CI/CD pipelines using Jenkins, Git, and Docker, and in automating infrastructure provisioning with Terraform and Ansible. Proficient in Kubernetes for container orchestration and skilled in monitoring with Prometheus, Grafana, and New Relic. Recognized for delivering high-availability systems, solving complex operational challenges, and collaborating effectively in agile teams.

Technical Skills

Cloud: AWS, Azure, GCP

AWS Services: EC2, EKS, S3, RDS, IAM, VPC, ALB, Route 53, CloudFront

DevOps Tools: Jenkins, Git, GitHub, Bitbucket, Maven, Nexus

IaC & Automation: Terraform, Ansible

Containers & Orchestration: Docker, Kubernetes

Monitoring: Prometheus, Grafana, CloudWatch, New Relic

Scripting: Python, Shell Scripting

Other: Linux, CI/CD, Agile, Oracle SQL

Experience

IBM (Benki Technologies-Payroll)

DevOps engineer

Bangalore

08/2025 - Present

- Managed and automated AWS infrastructure using Terraform, provisioning services such as EC2, EKS, S3, CloudFront, and RDS to support scalable and secure cloud environments.
- Developed CI/CD pipelines with Bitbucket and Jenkins for Java (Maven)) applications.
- Implemented Kubernetes rolling updates, HPA, and cluster auto-scaling for high availability.
- Configured and monitored system performance metrics using Prometheus, creating custom alerts and Grafana dashboards to track application performance, reducing incident response time by 40%.
- Developed reusable Ansible playbooks for automated provisioning and configuration of cloud resources.
- Deployed and managed containerized applications in Kubernetes clusters, ensuring high availability and fault tolerance through pod scaling, replica sets, and load balancing.
- Orchestrated blue-green and canary deployments on Kubernetes, ensuring zero downtime during application upgrades and feature rollouts.
- Coordinated infrastructure patching, monitoring, and upgrades with minimal disruption to business operations.

Tata Consultancy Service

DevOps engineer

Bangalore

03/2022 - 07/2025

- Monitored and tested application performance for potential bottlenecks and collaborated with developers on solution implementation.
- Lead efforts to migrate the existing infrastructure and applications to Azure.
- Taking care end to application deployment (IAAS , PASS Application deployment, SSL renewal, Custom domain update,etc)
- Expert on Azure core components (Created Azure Virtual Machine, Patching, Configuring redundancy, Webapp, Function app, Web jobs, Azure Monitor)
- Configuring log analytics workspace.
- Assist with patching of supported operating systems (Windows and Linux)
- Management of supported Windows Server platforms.
-
- Supporting Azure active directory (Multifactor authentication, SSO, Create, Read , Update and Deleted for Azure users , Groups and Devices).
- Fundamentals of Azure Kubernetes (Intake new Static sites, Updating Secrets ,Monitoring and checking high memory usage of Pod, Nodes, Azure file Explorer deployment , etc)
- Familiar with azure devops (Pipeline Deployment, Git hub deployment, yaml deployment)
- Created Docker Images, Kubernetes manifest files for deployments on Kubernetes cluster.
- Managed infrastructure spread across AWS and GCP with hybrid cloud architecture.
- Used metrics to monitor application and infrastructure performance using Grafana.
- Managed Ansible playbooks for configuration management and software provisioning.
- Established milestones for necessary contributions from departments and developing processes to facilitate their collaboration
- Ensured docker containers are up and running for Jenkins builds and analyze and fix any issues that hampers Jenkins build on Docker containers
- Steered initial docker setup on Linux machines, Configuring and adding docker instances to Jenkins, docker commands, writing docker files
- Managed Nagios to constantly monitor DevOps infra and add/remove monitoring items and drive alert reduction process, led to Nagios Alert setup, threshold amendments and Alert reduction
- Migrated Nagios Monitoring setup to Prometheus-Grafana, custom alert setup on the Devops applications, worked on KB Documentation creation/update

- Gained hands-on experience in AWS services including EC2, S3, IAM, and VPC basics.
- Assisted in provisioning cloud resources and understanding networking concepts like subnets and security groups.
- Created and configured basic CI/CD pipelines using Jenkins for sample applications.
- Built Docker images and managed containers for application deployment and testing.
- Wrote Ansible playbooks for automating basic configuration and package installation.
- Worked with Git for version control, branching, and code management.
- Deployed sample applications on Linux servers and performed basic troubleshooting.
- Assisted in setting up monitoring using Prometheus and visualizing metrics in Grafana dashboards.
- Learned Kubernetes basics including pods, deployments, and services.
- Performed basic system monitoring and log analysis to identify issues.
- Supported senior engineers in build and deployment activities.

Projects

Johnson & Johnson Project

Bangalore

- Developed and maintained CI/CD pipelines using Jenkins and Github for microservices-based applications.
- Experience in automation of manual tasks & processes enabling better governance and compliance using Python.
- Integrated Prometheus and Grafana for system observability, reducing incident detection time by 40%..
- Authored Ansible YAML scripts for remote server configurations, ensuring consistent and secure setups for critical banking applications. Developed python scripts for automating node health checks, monitoring CPU, memory, and other critical metrics, ensuring system stability.
- Created Change Requests for to ensure accurate information, proper assignment, and alignment with evolving business needs, enabling effective tracking, compliance, and timely resolution.
- Performed monthly patch upgrades including EKS version updates, Ingress controller enhancements, and New Relic agent patches to maintain platform stability, security compliance, and observability.
- Cloud Migration & Kubernetes Modernization Project

Cloud Migration & Kubernetes Modernization Project

- Migrated applications to AWS and Kubernetes (EKS) using Docker containers.
- Provisioned infrastructure using Terraform with reusable modules.
- Built CI/CD pipelines using Jenkins and GitHub for automated deployments.
- Implemented Kubernetes auto-scaling, rolling updates, and high availability features.
- Set up monitoring using Prometheus and Grafana dashboards and alerts.
- Automated configuration using Ansible playbooks.
- Implemented zero-downtime deployments using Blue-Green and Canary strategies.
- Managed Kubernetes Secrets and ConfigMaps for secure deployments

Key Achievements

SUPER CREW AWARD

Honored for exceptional performance and successful execution during a critical Tech Go-Live event at TCS

Education

Kalpataru Institute of Technology, Karnataka
Bachelor of mechanical Engineering

Tiptur
08/2018 - 08/2021

Shree Bhahubali polytechnic

Diploma in Engineering

Shravanabelagola
06/2015 - 05/2018

Governament high school
Secondary School Education

Channarayapattana
2015

Strengths

Analytical Thinking

Possess a strong aptitude for analyzing complex systems and resolving technical challenges through structured problem-solving and root cause analysis.

Quick Learner

Quick to grasp new technologies and tools, with a proven ability to adapt to evolving environments and integrate emerging best practices into daily workflows.

Teamwork and Collaboration

One of my core strengths lies in teamwork. My ability to collaborate effectively with colleagues is rooted in a deep understanding of the value that diverse perspectives bring to solving complex problems.
