[redacted]

Summary

- **10+ years of expertise** in Android development with a strong foundation in OOP, advanced design patterns, and Android internals.
- **Proficient in modern Android technologies** including Kotlin, Jetpack Compose, Coroutines, and MVVM architecture for building scalable, maintainable applications.
- **Experienced with libraries** like Hilt, Room, creating user-centric interfaces with Material Design while ensuring seamless integration with RESTful services.
- **Strong background in performance optimization**, modularization, and Dependency Injection, leading to testable and high-performance codebases.
- **Proven leadership and communication skills**, successfully leading and mentoring a team of 4-5 developers, driving project success through effective collaboration and technical guidance.

Technical Skills

Technical tools: Android, CI/CD, Gradle
Languages: Java, Kotlin, Javascript(Basic)
Database: SQLite, Room, MySQL
Designing Tools: XML, Jetpack Compose, HTML
Version Control: Git, SVN, TFS
Other Skills: Jetpack Compose, Hilt, Dagger, Coroutines, MVVM, MVP, OOP, Design Patterns

Experience/Projects

Paytm **Feb 2021 – Present**
Senior Technical Lead *Noida, India(Remote)*

- **Paytm App -** Official Paytm app which offers a range of services including payments, banking, insurance, and e-commerce.
- Worked on the scanner and improved the overall scanning performance and time.
- Worked on UPI onboarding vertical & developed features like Aadhaar-based pin Setup, Revamped Bank linking page on Jetpack Compose, multi bank linking solely.
- Lead the Android team of Onboarding Vertical
- Played a key role in the recent migration of Paytm to the TPAP (Third Party Application Provider) model.

Senior Software Engg. **Feb 2019 – Jan 2021**
Yatra.com *Gurugram, India*

- **Yatra – B2C Application -**: Yatra online offers a booking service that enables individuals to find and book flights, hotels, cabs, buses, etc.
- Redesigned the Flight UI according to the new material design.
- Implemented Multicity flow for flight module.
- Improved overall architecture of the project
- **Yatra Corporate Application -**: This application is made for the client's specifications. There is also a hierarchical approval flow and the whole application runs on a configuration-based architecture.
- Introduced Online Bus booking flow.
- Refracted the old code with new Kotlin code and MVVM standards.
- Migration of SDKs like Firebase crashlytics, analytics, and AndoridX.

Consultant **Dec 2015 – Jan 2019**

Infogain India Pvt. Ltd. *Noida, India*

- **Samsung Smartdost – HHP -**: Samsung Smartdost app is a role-based app that exposes a different set of features based on user login.
- Improved the base architecture with MVVM model.
- Reduced database insertion time and improved user experience during offline.
- Developed multiple dynamic modules which can be configured dynamically via console.
- **Samsung Retail Management System -**: SRMS is an android application that serves the purpose of automating the maintenance process of the fixtures deployed at the Dealer's store.
- Requirement gathering and documentation.
- Designing UI and implementing functionality of multiple modules.
- To implement the network layer and database layer with the help of Retrofit2, Dagger2 and RxJava2.
- **Samsung Partner Portal -**: SPP is an application for the Samsung internal employees and partners. User gets product information, updated price and new schemes on the handheld devices like mobile, tabs or wearable.
- Improved UI with updated Material Design.
- Handled features exposure based on multiple roles.

Software Engineer **May 2014 – Dec 2015**

Iprof Learning Solution Pvt. Ltd. *Noida, India*

- **Iprof Mobile Application -**: Iprof is a free education learning application that allows users to learn from PDFs and videos. It also enables users to give practice tests based on various subjects and courses. Users can also download the courses and test for studying even when the app is offline.
- Worked in an Agile environment and participated in different phases of the project cycle like design and development.
- Implement various app requirements like questionnaires and course description modules.
- Developed offline download of the content such as PDF and videos.
- **TDL – The DigiLibrary Mobile Application -**: TDL is a tablet application that is provided within the tablet and SD card that the user has purchased. This application reads the encrypted content from the SD card after decryption.
- Designing UI for different tablet resolutions.
- Maintenance of Applications for Tablet and webpage rendering with MathJax for rendering formulas

Certifications

Java *Oracle Certified Professional, Java SE 6 Programmer (1Z0-851)*

Education

Punjab Technical University **Aug 2008 – Jul 2012**

Bachelor of Technology in Computer Science *Punjab, India*
