PROFESSIONAL SUMMARY

- Over 11 years of IT experience specializing in **Java-based application development**.
- **Currently working as Lead Engineer at Hitachi Digital Services** for 3 years, overseeing HCAP Operate projects, driving strategic improvements, and ensuring successful project outcomes.
- Previously **Lead Engineer at Quest Global** for 3.1 years, focused on implementing a mobile device management system.
- Served as Consultant (**Module Lead**) at **Mahindra & Mahindra Group** (Bristlecone India Ltd.) for 2.5 years, developed solutions to manage product sales activities.
- Gained experience as a **Software Engineer at Sterlite Technologies Ltd**., Pune, worked on a BSS product for 10 months.
- Received a **CEO award** for exceptional innovation and contributions to project work.
- Proficient in **Agile methodologies** with experience in tools such as **Bitbucket, Jira, and Confluence**.
- Acted as **Scrum Master**, responsible for sprint planning, task creation, team delegation, organizing scrum and retrospective meetings.

TECHNICAL SKILLS

Skills	**Core Java**, J2EE, **Microservices**, **Spring boot**, **Rest API**, **Elasticsearch, AWS**, Azure, **Kafka**, Redis, Conjur
Frameworks	Spring, Hibernate, JPA
Development Tools	**Docker, Kubernetes, Spinnaker, IntelliJ**, Postman, **Jenkin**, **Grafana**, **SonarQube**, OWSAP Dependency, **Scheduler Tools** (Opsgenie, PagerDuty), Jacoco. **ITSM tools** (ServiceNow, Cloud Aware), **JMeter**
Database Technologies	MySQL, PostgreSQL, **Elasticsearch**, and SQL server
Management tools	**Git**, **Jira**, and **Confluence**
Script Languages	HTML, JavaScript, jQuery

WORK EXPERIENCE

Hitachi Digital Services (formerly Hitachi Vantara) – (Dec 2021 to Present)

Project Name : HCAP Operate

Description : HCAP Operate is an orchestration tool for managing incidents. It automates capturing and responding to incidents, allowing support teams to work more quickly and efficiently. It helps reduce resolution time by using machine learning to provide the root causes and runbooks with specific instructions for incident. HCAP integrates with ITSM tools such as **ServiceNow** and **CloudAware** and pulls team details from scheduling tools like **PagerDuty** and OpsGenie.

Key Responsibilities:

- As the Lead Engineer for the **HCAP Operate** Accelerator project, I develop and architect solutions using Spring Boot, **microservices** with **data management via JPA**.
- Collaborate with **service teams** to understand and analyze their requirements for effective **incident management and resolution.**
- Managing containerizes applications using **Docker** and orchestrated deployments with **Kubernetes**
- Implement **Redis caching** to enhance application performance and use **Kafka** for real-time messaging and data processing
- Create and manage **RESTful web services** (APIs) using annotation-based approaches for integration with external systems.
- Work with **Conjur APIs** for secure information management and integrate with third-party tools such as **ITSM and scheduling systems.**
- Utilize **AWS cloud platforms** for application hosting, scaling, and infrastructure management, ensuring high availability and performance.
- Monitor, respond to, and resolve incidents within the platform, coordinating with appropriate teams for **swift issue resolution**.
- Maintain detailed **documentation** of development processes and provide regular performance and **progress report**

Quest Global Technologies – (Nov 2019- Dec-2021)

Project Name : MDM (Mobile Device Management)

Description : Mobile Device Management (MDM) service to manage the devices, which are secure smart phones developed by client that uses Android platform. The devices will be given to employees of the government or commercial organizations, and they will be managed using Corporate Owned Personally Enabled (COPE) process. Policy Enforcing: There are multiple types of policies that can be enforced on MDM users, VPN configuration, Application Catalogue, Firmware update, Pre-defined Wi-Fi and Hotspot settings, Remote Wipe device and Device remote locking

Key Responsibilities:

[redacted]

Project Name : **DMS** (Dealer Management System)

Description : It is essential for Auto OEMs to keep in close contact with the end consumers, build brand loyalty and provide total customer experience. Implementation of centrally hosted Mahindra Dealer Management System (DMS) covers - Marketing, Pre-sales, Sales, Services, Spares, Warranty, Dealer Financials, Analytics, CRM and Business Intelligence.

Key Responsibilities:

- Developed solutions to manage **product sale**s activities.
- Developed **Online-Offline**, SMS Manager, Tally software, and Spare Module.
- Utilized **Spring, Hibernate, and JPA** for development.
- Led module development, providing technical guidance and oversight.
- Designed and implemented **backend services and system architecture**

Sterlite Technologies Ltd - (Nov 2015- Sep-2016**)**

Project Name : **CATMVNE** (Communication Authority of Thailand mobile virtual network enabler)

Description : A Communication Authority of Thailand mobile virtual network enabler (CATMVNE) is a company that provides network infrastructure and related services, such as network subsystems, business support systems (BSS), provisioning, administration and operations support systems (OSS) to mobile virtual network operators (MVNOs).

Key Responsibilities:

- Designed and developed **BSS** (Business Support Systems) modules for mobile virtual network operators (MVNOs).
- Configured and developed applications using **Spring Framework, including Spring MVC and JPA**.
- Worked on **Hibernate** configurations and designed database schemas.
- Developed and integrated **RESTful APIs** for system functionalities.

ExtrimityIndia Technologies - (Sep 2013- Nov-2015)

Project Name : **Karlstone Inventory Management System**

Description : Karlstone inventory management system extends beyond the traditional CRM functions and enable complete sales cycle management features by integrating online inventory management. The main objective of the application is to automate the existing system of manually maintain the records of the sales, purchases, recorder levels, Supplier, Customer monetary positions and other related transaction made at the company.

Key Responsibilities:

- Developed applications using **Java, J2EE, Spring, Hibernate,** and JPA**.**
- Designed and implemented backend services.
- Conducted code reviews, debugging, and testing to ensure **high-quality** software.
- Integrated **databases** and **optimized** queries for performance

EDUCATION

- **B.E (Electronics and Telecommunication**) Babasaheb Naik College of Engineer, Pusad (70%, 2013)
- **H.S.C. (General)**, Phulsing Naik College, Pusad (67%, May 2009)
