EXPERIENCE

Deloitte USI, Pune — *Software Consultant*

JAN 2021 - PRESENT

As a developer, I craft code as per JIRA stories, debug issues, write unit tests, lead PR reviews, and collaborate on technical feasibility and solution improvements.

Cybertech Software & Systems, Mumbai — *Senior Software Engineer.*

FEB 2018 - JAN 2021

As a Native Android developer, I specialized in utilizing the Esri ArcGIS SDK for mobile applications and implementing cryptography with AES and RSA. I am also skilled in team management and overseeing the complete software development lifecycle (SDLC).

Drushti Technet LLP, Pune — *Software Engineer*

AUG 2016 - FEB 2018

Android Application Developer using Android Studio and Java, skilled in team management, client communication, and the complete SDLC. Experienced in MySQL database design and handling, with a focus on best practices and good-quality algorithms.

Syntel Pvt Ltd, Pune — *Software Engineer*

AUG 2014 - JUNE 2016

Android (Java) and iPhone (Swift) Application Developer with experience in REST, Hibernate, and Spring (J2EE) web services and applications. Proficient in best programming practices.

EDUCATION

MIET, Jammu — *B.E (Computer Science), 2010-2014*

MONTH 2010 - MONTH 2014

Pursued a degree in Computer Science Engineering from the University of Jammu.

ROLES & RESPONSIBILITIES

- As a developer, my primary task includes crafting robust code to implement features as outlined in Sprint stories, tackle complex debugging challenges, craft rigorous unit tests to validate code integrity and lead Git PR code reviews to maintain code quality.

Primary Skills

Android, **Kotlin**, **Java**, **Jetpack Compose**, HILT, Coroutines, Flow, RoomDB, Retrofit, SQL, Storage Data Classes,

REST, API, Security & **Encryption** (AES\RSA), SOLID Principles, Design Patterns & OOAD, Multi-Threading & Concurrency, MVVM.

Additional Proficiencies

React JS, Javascript, CSS, HTML, **Spring Boots**, Rest Repository, JPA, **ArcGIS SDK**, GIS, **SQL**, MQTT Protocol (IOT), OAuth, Media Streaming Protocols.

- Coordinate with the product team to discuss and resolve queries related to story Acceptance Criterias to ensure technical clarity for seamless development.
- Enhanced feasibility activities to develop improved versions beyond previous iterations.
- Guide junior developers and collaborate on approach discussions prior to implementation.
- Host technical sessions to explore and discuss emerging technologies.

PROJECTS & WORK EXPERIENCE

FootLocker — *Android, Kotlin, Jetpack Compose, MVI, Hilt, RoomDB.*

Developed an e-commerce application on the Android platform for selling sportswear, merchandise, and related items. Users can also pre-order limited-edition products and choose between shipping or pickup options. The app features a robust, data-driven UI created with Jetpack Compose and MVI architecture, utilizing Hilt for dependency injection, RoomDB for local storage, and Airship for notifications. Payment options include GPay, Klarna, and PayPal.

FedEx Business Development Process — *React JS, Javascript, SpringBoot.*

Developed a web application aimed at enhancing the business development process for leadership teams. The application facilitates setting priorities, targets, managing relationships, and conducting reviews, thereby supporting team-building efforts within specific sections. Built using React.js, JavaScript, and Material UI, it incorporates WebSockets to deliver real-time updates from other team members.

USGA — *Android, JetpackCompose, MVI, WorkManager, StorageClass.*

Utilized Jetpack Compose to develop a data-driven UI for an Android Live Streaming & Scoring application with multilingual support. The application also includes key features such as ticket booking, merchandise purchases, and user preferences. As a developer, I was responsible for coding the functionalities (based on JIRA stories), debugging issues, writing unit tests, and reviewing pull requests to ensure high code quality.

Lilly Together — *Android, Kotlin, Data Binding, MVVM, MQTT, AES.*

Android healthcare application integrated with an auto-injector to monitor patient health and administer regular dosages. The app features symptom tracking, medication recommendations, and timely medicine reminders. Implemented MVVM architecture with data binding and AES encryption and employed the MQTT protocol for real-time notifications from the auto-injector.

Jiometry — *Android, Kotlin, ArcGIS SDK, RSA, AES, SpringBoot (JPA, REST).*

Developed multiple Android applications specialized for geospatial analysis (Using ArcGIS SDK 100.x.x) for the Reliance Jio Giga-Fiber project. These applications include system-generated network planning for various geographical areas, cost and infrastructure estimations, and hosting services. Implemented robust security practices to protect data and the codebase, ensuring compliance with all relevant standards.

Virtual Eye — *Android, Java, WebRTC, Streaming API.*

Developed a video calling Android application utilizing a WebRTC backend for duplex communication

and integrating telephony APIs. This project served as a feasibility study for the eventual solution, exploring the use of Wowza Media Server and VitamIO library to evaluate their viability.

FedEx Delivery System — *Android, Java, ArcGIS, GoogleMaps.*

a logistics application for the Android platform featuring ArcGIS integration for routing, real-time monitoring, and product delivery. The app includes offline support to ensure functionality without data connectivity. This project served as a feasibility study prior to finalizing the full solution.

Syntel Mobile Device Management — *Android, Java, Spring, Hibernate.*

A product suite for Syntel, compatible with all major mobile platforms (Android, iOS, BlackBerry, and Windows), enabling employees to access enterprise data securely on personal devices while adhering to necessary policies and restrictions. The application safeguards enterprise data by disabling certain device features during working hours (e.g., camera, social apps) that could pose a threat to sensitive information. It also provides role-based access and includes activity tracking to monitor usage.
