

VINOD KUMAR

DevOps Engineer

✉ vinodmandore897@gmail.com ☎ 8978072510

ABOUT ME

- Having 5+ years of experience in the IT industry comprising various roles like DevOps Engineer and Linux Administrator.
- Expertise in DevOps tools like Kubernetes, Terraform, Ansible, Maven, Apache Tomcat, Git, Jenkins and Docker.
- Expertise in various AWS Cloud Services including S3, VPC, EC2, ELB, EBS, Auto Scaling, ECS, ECR, Dynamo DB, RDS, Cloud Front, Cloud Trail, Code Build, Code Deploy, Code Pipeline, ACM, AWS Cognito etc.,
- Expertise in Infrastructure as a Code Provisioning tools like Terraform and AWS Cloud formation.
- Knowledge in Configuration Management Tools like Ansible.
- Good experience with scripting languages like Shell, Yaml and Groovy. Responsible for creating the branches, tagging, merging and pushing the code.
- Extensively worked with automation tools like Jenkins to implement the end-to-end automation.
- Knowledge in using build tools like MAVEN for the building of deploy able artifacts such as War from source code.
- Experience in using Tom cat application server for deployments.
- Application Deployments & Environment Configuration using Ansible and to automate the tasks in daily life.
- Experience with container-based tool Docker, working with Docker images, Docker Hub.
- Created and configured elastic load balancers and auto scaling groups to distribute the traffic and to have a cost efficient, fault tolerant and highly available environment.
- Enabling the SonarQube Quality gates for the modules of the project to maintain the Stability of the Code quality
- Automated Deployment to all environments (Dev, QA, Demo, Performance Test and Staging/UAT).
- Debugged build failures and worked with developers and QA people to resolve related issues.
- Proven experience on Jira ticketing tool.
- Managing Docker containers and Kubernetes cluster.
- Make sure applications are up and running. Trouble shooting and resolving the issues faced during smoke testing of the applications.
- Key strength is of quickly grasping new concepts and technologies and adaptable to new environment.
- Open to learn new technologies and tools.
- Good team player with strong analytical and problem-solving skills.
- Pro client in CI/CD pipeline creation and management to streamline the software development lifecycle and ensure rapid, reliable, and consistent deployment.
- In-depth experience with monitoring tools such as CloudWatch and ELK stack for tracking performance, logging, and alerting.
- Implemented blue-green deployment strategies to reduce downtime and risk in the release process.
- Worked with version control systems like Git for source code management and integrated Jenkins with Git for versioning and seamless CI/CD workflows.

SKILLS

AWS	Kubernetes	Docker
CI/CD pipelines	Terraform	Linux
Python	Shell scripting	Networking
Monitoring tools	Grafana	Automation
Troubleshooting	Ansible	Jenkins
GIT	AWS CloudFormation	Version Control
MAVEN	JIRA	Apache Tomcat

EXPERIENCE

Wipro

August 2025 - Present

DevOps Engineer

Project: Banking Project – Bank of America

Environment: Git, Maven, Jenkins, Docker, Apache Tomcat, AWS, Terraform

Roles & Responsibilities:

- Design, build, and maintain secure CI/CD pipelines for all environments (Dev, QA, UAT, Pre-Prod, Prod).
- Automate build, test, and deployment processes with zero/minimal downtime.
- Provision and manage infrastructure using IaC tools (Terraform, ARM, CloudFormation).
- Manage on-prem, cloud, and hybrid environments (AWS/Azure/GCP).
- Build, secure, and manage Docker images and registries.
- Deploy and operate applications on Kubernetes/OpenShift with HA and auto-scaling.
- Implement blue-green, canary, and rolling deployment strategies.
- Integrate DevSecOps practices (SAST, DAST, dependency and image scanning).
- Manage secrets using Vault/KMS and enforce least-privilege access.

Creative Tech Mars Software Solutions

May 2023 – July 2025

Software Engineer

Project: Cardinal Financial

Environment: Git, Maven, Jenkins, Docker, Apache Tomcat, AWS, Terraform

Roles & Responsibilities:

- Worked on CI/CD tool called Auto CM which is used for automating the application build and deployments process.
- Setting up the client calls for gathering the client requirements and application related dependencies.
- Created workspace or jobs in ACM for the clients based on the client's requirements. Created Repositories in GIT and integrated those repos with Auto CM.
- Helped in trouble shooting in case of any deployment failures.
- Created Jenkins pipeline jobs during the migration of Auto CM to Jenkins.
- Responsible for bringing up the various server environments like DEV,QA, Prod like and Production env's.
- Worked on ticketing tools like Jira and service now.
- Responsible for Environment Management and deployment automation, provision the infrastructure of windows and Linux environments.
- Used ANT scripts to automate the Build and deployment process to deploying the web services.
- Monitoring each service deployment, and validating the services across all environments.
- Build scripts using ANT and MAVEN
- build tools in Jenkins, Sonar to move from one environment to other environments.
- Responsible for bringing up the various server environments like DEV,QA, Prod
- Created private cloud using Kubernetes that supports DEV, TEST, and PROD environments.
- Managed Kubernetes charts using Helm. Created reproducible builds of the Kubernetes applications, managed Kubernetes manifest les and Managed releases of Helm packages.
- Managed local deployments in Kubernetes, creating local cluster and deploying application containers.
- Container management using Docker by writing Docker les and set up the automated build on Docker
- HUB and installed and configured Kubernetes.
- Pro client in A WS services like VPC, EC2, S3, ELB, Auto-Scaling Groups(ASG), EBS, RDS.
- Utilized AWS CLI to automate backups of ephemeral data-stores to S3 buckets and EBS.
- Utilized Linux Admin skills on deployment servers to make sure the servers are up and running and user, group activities.

EXPERIENCE

Synthokem Labs Pvt Ltd

June 2019 - November 2022

Associate Engineer and Administrator

Project 2: Health care Management System (April 2021 - Nov 2022)

Environment: Git, Maven, Apache Tomcat, Jenkins, Docker, Ansible, Linux

Roles and Responsibilities:

- Deployed applications on AWS EC2 (RedHat, Ubuntu) and managed S3 buckets.
- Configured Security group for EC2 Window and Linux instances using Cloud formation or terraform as per the requirements.
- Experience in managing and maintaining IAM policies for the organization in AWS to de ne groups.
- create users and assign roles and de ne rules-based access to AWS resources.
- Linux activities: User management tasks, Patching activities, Incident alerts, Disk space alerts, CPU performance issues and troubleshooting L1 and L2 issues.
- Created SNS notifications and assigned ARN to S3 for object loss notifications. Created AWS Route 53 to route traffic between different regions.
- Working on Linux Shell Scripts.
- Wrote Play books to install different types of applications such as Apache servers, nginx servers and to restart the services.
- Responsible for creating the branches and tagging the code.Supporting the developers in the con guration management environment.
- Generating code quality reports by using SonarQube.
- Responsible for the Plug-in Management,User Management, Build/Deploy Pipeline Setup and End-End JobSetup of all the projects.
- Jenkins is used as a Continuous Integration tool for automation of daily processes.
- Involved in the release process and deployed applications (WAR and JAR) to the Tomcat using Docker containers.
- Using Ansible as a configuration management tool and writing play books for daily application requirements.

Project 3: Leaserep

June 2019 - April 2021

Linux Administrator

Environment: Jenkins, Docker, Ansible, and Linux.

Responsibilities:

- Managed Linux server administration, including user management, system patching, and resolving incident alerts such as disk space and CPU performance issues.
- Monitored and maintained Linux-based environments, ensuring optimal server performance and Availability.
- Installed, con gured, and maintained Jenkins on Linux servers to support continuous integration and build processes.
- Supported the DevOps team by ensuring that Linux systems were properly con gured for application deployment using Tomcat.
- Automated routine tasks and con guration management using Ansible, writing playbooks to streamline Linux system administration.
- Managed Docker containers on Linux systems, setting up environments for application testing and troubleshooting container-related issues.
- Responded to L1 and L2 incidents on Linux systems, troubleshooting system issues, performance bottlenecks, and resolving them in a timely manner.
- Participated in release meetings, assisting in the deployment of applications to development and QA environments on Linux servers.
- Monitored system health, addressing issues such as high CPU usage or low disk space to ensure system stability.
- Assisted with backup processes and system updates to ensure compliance with best practices and maintain system security.

EDUCATION

Jawaharlal Nehru Technological University – Hyderabad
Bachelor of Engineering

May 2016
