[redacted]

PROFILE

Software developer offering 5 years of product-based applications extensive experience and exceptional Analytical and critical thinking skills. Delivering a proactive approach, great work ethic, and the ability to function will in fast-paced/deadline-driven team environments.

SKILLS

Python Programming

Cloud platforms like Amazon Web Services, Microsoft Azure, Terraform,GCP ,

Microservices, REST API's, HTTP REQUEST

FastApi, Flask, Django,FastAPI,Pyspark,Streamlit,Plotly-dash

Git, JIRA, Jenkins, CI/CD, Kubernetes dashboard Jmeter, Rally, Azure DevOps,Elasticsearch

AWS services like – AWS Step Functions, Lambda, S3, Ec2, ECS, SNS

SQLite, PostgreSQL, SQL, MongoDB

Advance Microsoft Office, Excel and PowerPoint

Fluent with English speaking and writing

Html,css,Javascript,React.js

PROFESSIONAL EXPERIENCE

Springer Nature Publishing Technologies

Python Developer, October 2023 – Present

This project aims to build an automated system for **journal abstraction and indexing**, emphasizing efficiency, user-friendliness, and advanced analytics. It combines **Python Django** for the backend, **HTML, JavaScript, AJAX, and CSS** for the frontend, and **MySQL** for data management. Using **Google Cloud Platform (GCP)** for scalable storage of journal PDFs and **Plotly Dash** for dynamic dashboards, it offers robust analytics. **Tableau** further enhances decision-making with advanced data visualization.

Key Contribution:

1. **Journal Abstraction and Indexing**
   - Automatically index journals by metadata (title, author, keywords).
   - Extract abstracts and key sections from articles.
   - Provide intuitive search and categorization.
2. **Cloud Storage and File Management**
   - Securely store PDFs on GCP.
   - Allow users to upload, download, and manage files with privacy controls.
3. **Backend (Django)**
   - Role-based user authentication and subscription management.
   - MySQL integration for structured metadata and user records.
   - Python scripts for metadata extraction and keyword indexing.
4. **Frontend**
   - Responsive UI with AJAX for smooth interactions.
   - Personalized dashboards and embedded PDF viewers.
5. **Analytics**
   - Use Plotly Dash for sales, subscriptions, and user engagement insights

Paytm(Paytm m'loyal)

Software Engineer, June 2022 – August 2023

m'loyal™ *is an advanced* ***mobile loyalty, data analytics, and precision marketing platform*** *seamlessly integrating mobile technology, web-based CRM, and visual analytics. Designed to drive exceptional results for retail brands, it combines cutting-edge tools like* ***PySpark*** *for large-scale data processing,* ***AWS cloud services*** *for secure, scalable infrastructure, and* ***SQL*** *for advanced data management.*
The platform leverages ***machine learning algorithms*** *and* ***real-time analytics*** *to empower marketers with personalized campaigns, improving customer engagement and maximizing ROI. Its hassle-free* ***SaaS model*** *ensures effortless deployment and functionality, making it a trusted solution for retail brands aiming for unprecedented growth.*
Key Contributions:

- ***Backend Development****: Created Django APIs based on business logic; used* ***Flask*** *with Pickle for login and data input pages.*
- ***Frontend Enhancements****: Designed user-friendly HTML pages using* ***React.js*** *and coordinated with the design team for better UI/UX. Implemented validations for email and mobile input.*
- ***Data Management****: Filtered data from MySQL to create MongoDB collections; designed and optimized SQL queries for personalized reporting.*
- ***Analytics****: Created dynamic dashboards using Tableau and Python's Plotly library for graphical insights.*
- ***Cloud Management****: Managed AWS infrastructure (S3, EC2) for scalability and cost-efficiency.*
- ***Testing & Reporting****: Conducted rigorous testing, documented issues in JIRA/ALM, and generated reports.*

With its focus on scalability, real-time insights, and personalization, ***m'loyal™*** *empowers retail brands to achieve significant business growth.*

Payas Systems pvt ltd

Software Engineer, August 2019 – April 2022
The **Loan Prediction Using Machine Learning** project automates loan eligibility assessments for bank customers by predicting their eligibility based on input data from an online application form. The system processes customer data, including age, income, and credit score, using a **machine learning model** trained to classify applicants as eligible or not eligible for a loan.

Key Contributions: [redacted]
Data Preparation: Collected and preprocessed loan datasets, including handling missing values, scaling features, and encoding categorical variables.
Model Integration: Serialized the machine learning model using Pickle and integrated it into the FastAPI application.
API Development: Developed a FastAPI endpoint to accept user data and return loan eligibility predictions.
Web Interface Design: Designed and integrated the data input form with the FastAPI backend for loan prediction.
Data Validation: Implemented input validation using Pydantic to ensure data accuracy and proper formatting.
Visualization: Used Seaborn for creating visualizations to analyze loan prediction trends and model performance.
Collaboration: Coordinated with cross-functional teams to gather requirements and align development progress with project goals.

EDUCATION

Bachelor of Engineering (B.E)
G.H. Raisoni College of Engineering (CSE),Jun 2016 - Jun 2019

- CGPA/Percentage - 7.6

Diploma in Engineering (CSE), Polytechnic
Government Polytechnix, Jun 2012 - Jun 2016

- CGPA/Percentage – 79%

X (Secondary), State Board

- CGPA/Percentage – 78.18%
