IMTEYAZ AHMED

OBJECTIVE:

To secure a responsible and growth-oriented position in an organization where there is a scope of contributing and updating knowledge and skills for the development of self and organization.

PROFESSIONAL SUMMARY:

- 10 yrs. of experience in developing Web based applications using Java, Camunda BPMN, DMN and Spring Boot
- Having good knowledge of developing workflow using Camunda BPMN and Camunda Modeler.
- Having good knowledge of rule engine using DMN Decision Engine, preparation of DMN
- Having good knowledge of Microservices architecture like Orchestration, Choreography, API Gateway, Load Balancing, Circuit Breaker, Distributed Tracing using Zipkin and Spring Cloud architecture.
- Having good knowledge of developing serverless architecture using AWS components like S3, Lambda, SQS, SNS, Dynamo DB, API Gateway, CloudWatch and AppSync.
- Having good knowledge of ORM tool like Hibernate and JPA
- Having good knowledge in Restful Web Services, Spring Data JPA, Spring Data Mongo, MySQL, MongoDB, Hibernate, Mockito and EasyMock.
- Very well versed with SVN and GIT versioning tools.
- Good communication, analytical skills and flexible to learn new technologies.
- Hands on experience in working on agile methodology.
- Strong team player with excellent working skills as individual contributor as well as experience in managing the team

PROFESSIONAL EXPERIENCE:

- Working as Senior Principal Software Engineer in Operative INDA PVT LYT, Bengaluru since March 2018.
- Worked as Software Engineer in Aris Global, Bangalore September 2017 to March 2018
- Worked as Software Engineer in ABK Software, Bangalore from September 2014 to September 2017.

EDUCATIONAL QUALIFICATION:

MCA from Patna Science College (**Patna University)** in 2013 with 72.50%
NIIT from Kuvempu University in 2010 with 62%

TECHNICAL SKILLS:

- Programming Language: Java
- Database: MySQL, DynamoDB, MongoDB
- Framework/Technologies/Tools: Spring Boot, Camunda BPMN, DMN, AWS
- Web Technologies: JavaScript
- Code Management Tools: SVN, GIT, Bitbucket, Stash.
- Project Tracking Software: JIRA
- Testing Tools: Junit, JaCoCo, SonarQube

PROJECT DETAILS:

Project 1

Title	:	AOS
Role	:	Lead
Team Size	:	10
Duration	:	Mar 2018 – till date
Technologies	:	Spring Boot, Restful Web Services, Spring Data JPA, Spring Data Mongo, MongoDB, AWS S3, AWS Lambda, AWS CloudWatch, AWS SNS, AWS SQS, AWS DynamoDB, AWS API Gateway, MySQL, Mockito, EasyMock

Description: AOS (Advertising Operating System) helps to maintain the advertisers to advertise on the digital as well as linear/local stations. Its data-driven and highly configurable architecture that works across all linear, digital, and cross media and con- verged deals. It is helpful to schedule advertisements to be telecasted and provides a reliable platform from order to payment. Camunda highly configurable workflow architecture pro- vides the feature to maintain the linear, digital and converged deals workflow status dynamic, highly configurable and easy maintainable.

Responsibilities:

- Requirement gathering with product.
- Architecture design
- Team handling
- Meeting with multiple teams to fix dependencies.
- Follow scrum methodology.
- Agile methodology.
- Peer-to-peer code review
- Used Camunda BPMN to design customizable workflow.
- Used Camunda DMN to design customizable Approval rules (applicable in incremental fashion) and integrated it with customizable workflows
- Created automatic customizable syncing process to downstream systems
- Created multiple container and lambda to facilitate flow between AOS to ad server and reverse flow of ad server to AOS
- Development, Bug Fixing and Writing Junit test cases.
- Involved in Code Review using SonarQube.

Project 2

Title	:	iSEHATI (Personal Health Record)
Role	:	Developer
Team Size	:	5
Duration	:	Mar 2017 – Sep 2017
Framework	:	Spring MVC, Spring JDBC
Server	:	JBoss 7.1

Description: iSEHATI provides Patients and/or their authorized persons with instant and easy access to their personal health information, in a secure environment, across the network of participating Care Providers. iSEHATI also helps patients to search for physicians across the participating Care Providers network, access their schedule avail- ability, book instantly for appointment, manage their future booking and share their feedback their experience with a particular Care provider.

Responsibilities:

- Involving in Designed and implemented user interface.
- Doing Server side and client-side validation
- Involving in writing business logic, JDBC query.

Project 3

Title	:	Healthcare Information Management and Monitoring application (HIMMA)
Client	:	ATK Services and Marketing
Role	:	Developer
Team Size	:	6
Duration	:	Sep 2014 to Sep 2017
Technology	:	Java, Struts 2, Web services using SOAP, JQuery, MySQL
Framework	:	Struts 2, Hibernante, Spring Core Scripting
Language	:	Java Script & JQuery
Server	:	JBoss 7.1

Description: HIMMA is aimed at automating the daily activities of any healthcare pro- vider, and managing the complexity and issues associated with providing care to pa- tients to ensure a positive experience for all parties engaged.
HIMMA seamlessly integrates healthcare solutions covering Hospital, Clinical, Laboratory, Research, Payment, Insurance, Inventory, Pharmacy and much more in ad- herence to the prevailing healthcare compliances and standards.

Responsibilities:

Involved in the development of various modules like System Administration, MBU Administration, Nursing and Doctor Workbench.

- Designed model classes and Tables.
- Development, Bug Fixing and Unit Testing.
- Doing Server side and client-side validation
- Involved in Code Review using SonarQube
