[redacted]

Professional Summary:

- Acquired 4.9 years experience as a Software Engineer-II and DevOps Engineer, I specialize in designing and developing asynchronous APIs using **Django** and DRF **CICD** pipeline creations, and crafting efficient database schemas with **PostgreSQL** also maintaining the productions servers effectively.
- Completed the certifications such as **DevOps** Engineer course at heydevops and AWS with **Terraform**, **Kubernetes**, **Ansible** Automations in Udemy.
- I have received the appreciation awards in the field of development and **DevOps** tools and support in production servers' maintenance.
- Experience in **AWS** to create, manage and configure the services like ALB, ASG, EC2, IAM, S3, Redis, EBS, Route53, RDS, Security Groups and VPC along with automating the AWS cloud deployments.
- Hands on experience in automating **CI & CD** pipeline using Jenkins tools. Worked on installing/upgrading **Jenkins Master/Slave** on multiple servers.
- Responsible for **Dockerizing** the applications. Hands-on experience in creating **Dockerfiles** and then building image and deploying it to various environments. Created the manifests for **Kubernetes** deployments for some mission critical applications.
- Integrated **Grafana** with **Postgresql** Database and **Docker** containers as well as all linux servers to monitor and set an alert rules.
- Hands on experience in **Ansible** to automations configurations and deployments.
- Hands on experience in Python programming and **Dajngo**. Have good experience on API creations using the **DRF** and **Flask** Rest Framework and **FastAPI**.
- Good knowledge in checking the code quality and application security using the **SonarQube**, **Bandit**, **Licenses** checks.
- Experience on **API Designs** and **Database** schema design for applications.

Technical Skills:

Programming & Scripting	Python, Groovy, Shell Scripting
Operating Systems & CI tool	Linux, windows, Jenkins
Configuration Management & VCS tool, Artifactory	Docker, Docker Swarm, Kubernetes, Ansible, Git, Jfrog
Docker Orchestration & Monitoring tools	Grafana, Prometheus, ELK
Database, Application Security tools	PostgreSQL, Mongodb, SonarQube, Bandit, Trivy
API Gateway, Cashing, Scheduling, Message Broker	Apache APISIX, Nginx, Redis, Celery, RabbitMQ
Web & API Frameworks	Dajngo, DRF, ORM, Flask, Flask Rest, FastAPI
Cloud Environment	AWS (EC2, IAM, ASG, ALB, ROUTE53, RDS, S3, EBS, VPC etc.)
Integrations	ML Pipeline Integrations, Embedded Devices, Web Sockets

Professional Experience:

- Working as Software Engineer-II Python DevOps Engineer in ATAI (Permanent Employee) from May 2021 – present, Hyderabad.
- Worked as Software Engineer in NextRow Digital Pvt (Permanent Employee) from May 2019 – Jul 2020, Hyderabad.

Work Experience:

Project#1

Project Name	**Warehouse Automations**
Client	**TKD Delhi**
Role	**Engineer-II**
Duration	**2021-22 POC, 2023-2024 client**
Environment	**Python, Django, DRF, ORM, PostgreSql, Docker, Git, API Gateway**

Roles and Responsibilities:

- Key member in the team to supporting for end to end delivering product and also have experience in the area of API design and implementation using **Django, Flask** and **FastAPI**. Key player to integrations with UI frameworks like **React, Angular**.
- Worked on micro service architecture with **API gateway** integrations using **APISIX**.
- Introduced the modern deployment strategies and fully manages the deployment environment in all stages of application.
- Database performance issue fixes in production like storage and **Postgres** connections enabled the **Postgres monitoring** to **Postgres** metrics.
- Enabled the **ELK** for logging to the applications it was helped us the debug the productions issues quickly.
- Introduced the modern deployment process by using **Docker** and **K8's** for deployment so that team has achieved the speed deliverables.
- Worked **Web Sockets** for real time updates in the application. And Integrations with **ML pipeline** and scaling the applications.
- In order to increase the application's responsiveness, performance I have profiled it and optimized using **(Django ORM**). And database techniques Indexing, Table Partitioning.
- Hands experience in creating the **Docker** files **Docker Compose** files for all the micro services and applications.
- I am the responsible person to manage the **production server effectively**. I was trained team members and juniors in the area of Docker.
- Written **Unit Test** cases and **load testing** on applications and API's.
- Integrations with **Embedded Systems**.
- Hands on experience in **Ansible** to automations configurations and deployments.
- Wonderful experience integrating warehouse and ML Pipeline using **RabbitMQ** message broker, and continuously monitoring camera feeds to show real-time stream on the dashboard.
- Improved the security capabilities to the applications by using the **CORS** (CSP).
- Enabled the **NGINX** web server to supporting the reverse proxy and load balancing.
- Every day, the warehouse analytics data is saved by implementing **Celery**, **Celery Beat** scheduler.

Project#2

Project Name	**Rack Warehouse Automations, Yard Automations**
Client	**TKD Delhi**
Role	**Engineer-II**
Duration	**2023-2024 client**
Environment	**Python, Django, DRF, ORM, Mongodb, Docker, Git, PostgreSQL**

Roles and Responsibilities:

- Created the database schema for Rack Warehouse, finalizing the API designs, developing the APIs using and **DRF**.
- Performed the code review sessions for juniors before going to branch merge and release**.**
- Clearealy communicate with frontend developer to perform smooth integrations and testing of an application.
- Write's API **Unit testing** to the both applications. Educated the team to be make hobby to write unit test cases.
- Dockerization of Rack and Yard applications. Created the **Dockerfile** and **Docker compose** file
- Wrriten crone jobs for background tasks running in the **Linux** applications**.**
- Performed load testing on application by writing a **Python** scripts, worked on **Barman** to take **Postgres** incremental backups.
- Added application to concurrence by using the **Uwsgi** and **Gunicorn** to improve the application performance.
- Written complex **ORM** queries to improve the applications query performance.
- Working on equipment live tracing system in the Yard by ingrated with the **Web Sockets** and GPS tracking.
- Working the Rack warehouse Real time updates feeding into dashboard by using the **Web Sockets**.
- Enabled the **NGINX** web server to supporting the reverse proxy and load balancing.
- Implemented the Authentication and Authorization by using **Django Admin**, JWT, and API Key. Added **Redis** caching

Project#3

Project Name	**Warehouse Automations, Gate Automations, Yard Automations**
Client	**TKD Delhi**
Role	**DevOps Engineer**
Duration	**2022-2024 client**
Environment	**Jenkins, Shared Library K8's,Grafana,ELK, Docker, PostgreSql, AWS, Git**

Roles and Responsibilities:

- Key member in **DevSecOps** Team and supporting more than 8+ application team across multiple domains.
- Primary responsibility to onboard and setting up **CICD** pipeline for multiple frontend and backend applications in both Wireline & Wireless domain. Integrated the **shared library** to modularizing the goovy for pipe line scripts.
- Working with QA team for integration of QA jobs with Jenkins pipeline to have complete **CICD** setup**.**
- Setting up **Ansible playbooks** to perform deployment in servers and **shell scripts** to monitor the services.
- Configuring sonarqube dashboard and help application team in publishing **unit test** and coverage reports in **Sonarqube** cloud for **static code analysi**s. Setting up **Sonarqube** portfolio for multiple microservice and UI applications.
- Enhancement of pipeline by implementing multiple **Quality Gates** in pipeline and automation.
- Automation of new **Git** branch creation, Merge approval and approvers' setup, merge request creation and version increment in build scripts at start of every program increment. Upgrading **Jenkins Master/Slave** on multiple servers.
- Setting up **groovy scripts** to accommodate multiple applications in a single **Jenkins** pipeline which carries various stages. Prebuild stage Sonarqube, Compiling code and packaging deployable artifacts and publishing them to Artifactory, performing deployment in servers along with respective QA testing. Administrative part of Jenkins was taken care. Elastic search, Logstash and Kibana was installed in the **AWS** server.
- Integrated the applications performance monitoring tool such as **Grafana** and **Prometheus**. **CAdvisor** for **Docker** monitoring, ELK for production application logs monitoring. And created the **alerts** rules for varies applications.
- Working in code security vulnerabilities checks such as **SAST**, **Docker** image scanning by **Trivy**, **packages license check.** Reports will get notified to team in the Slack and Gmail.

Educations Qualification:

- Bachelor of Engineering in Computer Science and Electronics from JNTUH passed out in May 2019.
- Diploma in Civil Engineering from BVK polytechnic college passed out in May 2015.

Trainings and Certifications:

- DevOps Certified Engineer by HeyDevops on July 2024 with certification.
- AWS Certified Engineer issued by Udemy on August 2024 with certification.

Personal Skills:

- Have **willingness to learn new things** and I am a self-motivated person.
- Have Good interpersonal skills and **good communication skills**.
- Have good **leadership qualities** and like to lead my juniors to the success path.
- Have excellent problem solving, time management skills**, ability to work independently** or as part of a team.

Hobbies & Interest:

- I like to play foot ball and have participated in Intra DC tournament in ATAI.
- I like to take a lead and implement the solution to bring the value to the work environment.
